## SELF-DIAGNOSIS FUNCTION

The self-diagnosis function consists of error codes for users which are displayed automatically when errors occur, and error codes which show the error history in the test mode during servicing. For details on how to view error codes for users, refer to the following box in the instruction manual. For details on how to perform checks during servicing, refer to the following “Procedure for Using the Self-Diagnosis Function (Error History Display Mode)”.

### Self-diagnosis Display

This system has the Self-diagnosis display function to let you know if there is a system malfunction. The display shows a code made up of three letters and a message alternately to show you the problem. To solve the problem refer to the following list. If any problem persists, consult your nearest Sony dealer.

#### C11/MD Protected

The MD is protected against erasure.

→Remove the MD and slide the tab to close the slot (page 28).

#### C13/REC Error

Recording is not possible.

→Move the system to a stable place and start recording over from the beginning.

The MD is dirty or is scratched or the MD does not meet the standards.

→Change the MD with another one and start recording over from the beginning.

#### C13/Disc Error

The MD deck cannot read the disc information correctly.

→Eject the MD once, then insert it again.

#### C14/Disc Error

The MD deck cannot read the disc information correctly.

→Change the MD with another one.

→Erase all the recorded contents of the MD using the Erase function on page 39.

### Procedure for Using the Self-Diagnosis Function (Error History Display Mode)

**Note:** Perform the self-diagnosis function in the “error history display mode” in the test mode. The following describes the least required steps. Be careful not to enter other modes by mistake. If other modes are set accidentally, press the **▶|| (CD)** button to exit that mode.

1. With the power off, press the **▶|| (MD)** button while pressing the **PLAY MODE** button.
2. Rotate the **VOLUME** knob until “ERR DP MODE” is displayed.
3. Pressing the **■ (CD)** button sets the error history mode and displays “total rec”.
4. Select the contents to be displayed or executed using the **VOLUME** knob.
5. Pressing the **▲ (CD)** button displays or executes the contents selected.
6. Pressing the **▲ (CD)** button another time returns to step 4.
7. Pressing the **▶|| (CD)** button displays “ERR DP MODE” and exits the error history mode.
8. To exit the test mode, press the **REPEAT** button. The unit sets into the STANDBY state, and the test mode ends.

## ITEMS OF ERROR HISTORY MODE ITEMS AND CONTENTS

### Selecting the Test Mode

Display	Details of History
total rec	Displays the recording time in the form of “r□□□□□h”. The displayed time is the total number of hours the laser is high power, which is about one-fourth of the actual recording time. The time is displayed in decimal digits between 0h to 65535h.
total play	Displays the playback time in the form of “p□□□□□h”. The displayed time is the total actual play time. The paused time is not counted. The time is displayed in decimal digits between 0h to 65535h.
retry err	Displays the total number of retries during recording and retry errors during playback in the form of “r□□p□□”. “r” indicates the retries during recording while “p” indicates the retry errors during playback. The number of retries is displayed in hexadecimal digits between 00 to FF.
total err	Displays the total number of errors in the form of “total □□”. The number of errors is displayed in hexadecimal digits between 00 to FF.
err history	Displays the 10 latest errors in the form of “0□ E@@”. The □ indicates the history number. The smaller the number, the newer is the error. (00 is the latest error.) The @@ indicates the error code. Refer to the following table for details. Rotate the <b>VOLUME</b> knob to switch the error history.
er refresh?	Mode which erases all the error histories. The error history serves as a reference for when to replace the optical pick-up. Perform this procedure when the optical pick-up has been replaced in order to erase past error histories and not at other times. Press the <b>(CD)</b> button when “er refresh?” is displayed. The history will be erased and “Complete!” will be displayed momentarily. Be sure to check the following when this mode has been executed. <ul style="list-style-type: none"> <li>• Check that the data has been erased.</li> <li>• Perform recording and playback, and check that the mechanism operates normally.</li> </ul>

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

#### Flexible Circuit Board Repairing

- Keep the temperature of soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

## SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

### LEAKAGE

The AC leakage from any exposed metal part to earth Ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

## SECTION 1 SERVICING NOTE

### NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

### NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

### LASER DIODE AND FOCUS SEARCH OPERATION CHECK

Carry out the "S curve check" in "CD section adjustment" and check that the S curve waveform is output three times.

#### Note:

Be sure to connect all wires (including FFC) in the MD section before applying power or ICs may be damaged.

### DISC TABLE GETTING OUT PROCEDURE ON THE POWER SUPPLY IS OFF

1. Insert the tweezers to a hole on bottom of the chassis as shown a figure, then turn fully it toward direction ②.
2. Pull out the disc table.

## SECTION 6 ELECTRICAL ADJUSTMENTS

### MD SECTION

#### 6-1. PRECAUTIONS FOR CHECKING LASER DIODE EMISSION

When checking the emission of the laser diode during adjustments, never view directly from the top as this may cause blindness.

#### 6-2. PRECAUTIONS FOR USE OF OPTICAL PICK-UP (KMS-260A)

As the laser diode in the optical pick-up is easily damaged by static electricity, solder the laser tap of the flexible board when using it. Before disconnecting the connector, solder first. Before connecting the connector, be careful not to remove the solder. Also take adequate measures to prevent damage by static electricity. Handle the flexible board with care as it breaks easily.

Optical pick-up flexible board

#### 6-3. PRECAUTIONS FOR ADJUSTMENTS

1) When replacing the following parts, perform adjustments and checks marked ○ in the order shown in the following table.

	Optical Pick-up	BD Board		
		IC171	D101	IC101, IC121, IC192
1. Temperature compensation offset adjustment	×	○	○	○
2. Laser power adjustment	○	○	×	○
3. Traverse adjustment	○	○	×	○
4. Focus bias adjustment	○	○	×	○
5. Error rate check	○	○	×	○

2) Perform the adjustment in the test mode.

After completing the adjustments, exit the test mode.

3) Perform the adjustments in the order shown.

4) Use the following tools and measuring devices.

- Check disc (MD) TDYS-1 (Parts No. 4-963-646-01)
- Laser power meter LPM-8001 (Parts No. J-2501-046-A) or MD Laser power meter 8010S (Parts No. J-2501-145-A)
- Oscilloscope (Measure after calibration of the probe).
- Digital voltmeter
- Thermometer

5) When observing several signals on the oscilloscope, etc., make sure that VC and ground do not connect inside the oscilloscope. (The VC and ground will short-circuit.)

**Note :** When performing laser power checks and adjustment (electrical adjustment), use of the new MD laser power meter 8010S (J-2501-145-A) instead of the conventional laser power meter is convenient.

It sharply reduces the time and trouble to set the laser power meter sensor onto the objective lens of the pick-up.

### ELECTRICAL PARTS LIST

**Note:**

The components identified by mark  $\Delta$  or dotted line with mark  $\Delta$  are critical for safety.  
Replace only with part number specified.

Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité.

Ne les remplacer que par une  
pièce portant le numéro spécifié.

**When indicating parts by reference number, please include the board name.**

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked “\*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- RESISTORS  
All resistors are in ohms  
METAL: Metal-film resistor  
METAL OXIDE: Metal Oxide-film resistor  
F : nonflammable

- SEMICONDUCTORS
  - In each case,  $u: \mu$ , for example:
    - $uA...: \mu A..., uPA...: \mu PA..., uPB...: \mu PB...,$
    - $uPC...: \mu PC..., uPD...: \mu PD...$
- CAPACITORS
  - $uF: \mu F$
- COILS
  - $uH: \mu H$
- Abbreviation
  - CND : Canadian model
  - EE : East European model
  - MY : Malaysia model
  - SP : Singapore model
  - JE : Tourist model
  - HK : Hong Kong model
  - AR : Argentine model
  - AUS : Australian model
